- 3) Ravi didn't have a pen because he lost it. (lose)
- 4) I have seen a lovely picture in the gallery. (see)
- 5) John has been playing on the laptop since 6 O'clock. (play)

b) Read the following passage carefully.

The earth is the third planet from sun and the only known planet to support life. It has a diameter of approximately 12,742 kms and is the fifth largest planet in the solar system. The Earth is a Rocky planet with a solid outer crust and a molten inner core. Its atmosphere is composed of nitrogen, oxygen and trace amounts of other gases.

The Earth's rotation on its axis causes day and night, while its orbit around the sun causes the seasons. The earth's axial tilt is responsible for the variation in sunlight received by different parts of the planet throughout the year, resulting in the seasons. The Earth's magnetic field, created by the motion of the molten iron in its core, helps to protect the planet from harmful solar radiations. The earth is also unique in its abundance of water, which covers approximately 71% of its surface. This water is essential for life and plays a crucial role in regulating the planet's temperature and climate.

Answer the following :

- 1) What is Earth ?
 - 2) How does Earth's rotation cause day and night ?
 - 3) What causes the seasons on earth ?
 - 4) What is the Earth's magnetic field and why is it important ?
 - 5) What is unique about the Earth's abundance of water ?
-
